

Rajasekar C

Data Engineer | Systems Builder

Built and maintained large-scale data systems (~50M records/day). Experienced in SQL, Python, and backend systems. Currently building fast, AI-assisted applications and generative systems.

WHAT I DO

- Build data pipelines and backend systems
- Rapidly prototype applications using AI-assisted workflows
- Develop generative and interactive systems
- Debug production issues and optimize performance

EXPERIENCE

Independent Developer

2025 - Present

Building and shipping applied products

- Built multiple web applications and generative systems using AI-assisted tools (Cursor, Copilot)
- Developed API-driven data pipelines using Python
- Designed Redis-based caching and backend workflows
- Rapidly prototyped and deployed applications

Digit Insurance

2023 - 2025

Data Engineer

- Maintained pipelines processing ~50M records daily
- Reduced issue resolution time from 30 minutes to under 1 minute
- Resolved 4000+ production issues and reduced backlog significantly
- Built internal tools using Flask and Pandas

Appzwork

2020 - 2023

Software Engineer

- Developed SQL-based systems for banking and insurance clients
- Built complex queries and stored procedures
- Handled production debugging and deployments

PROJECTS

Valipokkann Platform

Full-stack artist platform with serverless backend. CMS architecture and media processing pipelines. GitHub: github.com/innovinitylabs

Onchain Rugs

Generative NFT system with Redis-based caching and indexing. GitHub: github.com/innovinitylabs

Free Notes (iPad App)

Shape recognition and layered architecture. GitHub: github.com/innovinitylabs

SKILLS

- Core: SQL, Python
- Backend & Data: ETL pipelines, PostgreSQL, Redis
- Tools: Git, Linux, Cursor (AI-assisted development)
