Summary

Data Engineer with 5+ years of experience building and optimizing large-scale data systems. Strong background in SQL, Python, and backend engineering, with experience handling high-volume pipelines (~50M records/day). Recently focused on building independent systems and applications. Experience working in high-volume production environments with real-time, customer-facing systems.

Experience

Digit Insurance – Data Engineer (Nov 2023 – Jun 2025)

- Built a Flask + Pandas tool reducing Vahan issue resolution from ~30 minutes to under 1 minute (3 clicks, no SQL required); awarded “Tech Titan”
- Designed and maintained ETL pipelines processing ~50M records daily
- Developed real-time stored procedures for policy renewal detection and automated MoEngage notifications, eliminating redundant alerts
- Implemented PII classification and secure credential storage workflows for compliance
- Automated DB schema versioning by extracting Postgres DDL and syncing with Git (Bitbucket), improving traceability and deployment reliability
- Developed ETL pipelines and schemas for Bima Satrak regulatory service
- Reduced production backlog from ~600 to under 70; resolved 4000+ issues (up to 160/day)
- Built Excel-to-database ingestion tools using Pandas for operational workflows
- Streamlined credit update processes using SQL automation and stored procedures

Appzwork – Software Engineer (Jan 2020 – Nov 2023)

- Delivered SQL-based data solutions for banking and insurance clients
- Built complex queries, stored procedures, and analytics workflows
- Handled production debugging, incident resolution, and deployments
- Supported database maintenance and recovery operations

Independent Systems & Application Development (Jun 2025 – Present)

- Built end-to-end systems including backend services, frontend interfaces, and experimental applications across multiple domains, with a focus on performance and rapid iteration
- Developed API-driven pipelines and automation workflows
- Designed Redis-based caching and indexing systems
- Rapidly prototyped and iterated products using AI-assisted development tools

Other Relevant Projects

- Valipokkann Platform – Full-stack artist platform with dynamic content and media systems (<https://valipokkann.in> | https://github.com/innovinitylabs/valipokkann_in)
- Onchain Rugs – Generative system driven by blockchain state and metadata architecture (<https://onchainrugs.xyz> | <https://github.com/innovinitylabs/onchain-rug>)
- Madraschecks – Generative textile system with algorithmic pattern rendering and historical context (<http://www.madraschecks.com> | <https://madras-generator.madraschecks.com/> | <https://github.com/innovinitylabs/checks-of-time-beta>)
- Hard Copy – iPad note-taking app with structured interaction and memory-assisted design (<https://github.com/innovinitylabs/free-notes>)

Skills

Core: SQL (advanced), PL/SQL, Python (working knowledge)

Data & Backend: ETL pipelines, Data Modelling, Performance Optimisation, Oracle, PostgreSQL, ClickHouse, DB2, Redis, API integration, Pandas, PySpark, Shell,

Tools & Workflow

Git, Linux, Selenium, Docker, MoEngage

Development Workflow

Cursor, Claude, OpenClaw, Codex, Xcode

Education

B.E. – RMK Engineering College – CGPA: 7.17

HSC – Infant Jesus MHSS – 87.4%

SSLC – St. Mary's Matriculation – 86.5%
